By David Penrose

# Executive summary

## Rootbeer repository activity

## Significant Findings

1. Contributions are concentrated on two users (Scott Alexander-Bown (39 touches) and Matthew Rollings (33) account for 72 of 111 touches, or 64.9%. This means maintenance knowledge may depend on just a few people
2. Maintenance is directed to core Java files. RootBeer.java has 40 touches (36.0%) and Const.java has 17 (15.3%)
3. Maintenance is periodic and intermittent. Ninety-seven touches (87.4%) occurred by the end of 2021. Only 14 occurred afterwards.

### Limitation

This analysis covers selected files chosen by extension and path. Renamed files, deleted files, and config files may be missed. Author aliases were not de-duped, so it could mean there are less than 18 contributors.
